

The diagram illustrates an equality between two configurations of strands labeled A and M .

On the left side of the equation:

- Two vertical strands are shown, labeled A (left) and M (right) at the bottom.
- The M strand has a crossing where it passes over the A strand.
- A curved arrow on the M strand indicates a rotation or twist.

In the center is an equals sign ($=$).

On the right side of the equation:

- Two vertical strands are shown, labeled A (left) and M (right) at the bottom.
- The A strand has a crossing where it passes over the M strand.
- A curved arrow on the A strand indicates a rotation or twist.
- Below the A strand, the expression $v_{\chi(g)}^{-1}$ is written.
