

$$\mathrm{SkAlg}^{int}(\text{annulus}) \simeq \mathrm{SkAlg}^{int}(\text{disk})$$

The diagram illustrates an equivalence between the skein algebra of an annulus and the skein algebra of a disk. On the left, the annulus is shown as a gray ring with a central white circle, divided horizontally by a line with two black dots. The top half is labeled D_1 and the bottom half D_2 . On the right, the disk is shown as a gray circle divided horizontally by a line. The top half is labeled $D_1 D_2$. Both diagrams have tick marks on their outer boundaries.
