

$$\mathrm{SkCat}\left(\begin{array}{c} \text{Diagram 1} \end{array}\right) \simeq \mathrm{SkCat}\left(\begin{array}{c} \text{Diagram 2} \end{array}\right)$$

The image shows an equivalence between two string diagrams in the rewriting theory of symmetric monoidal categories. Both diagrams are enclosed in circles and represent the same categorical structure.

Diagram 1 (Left): A circle divided into three horizontal regions. The top and bottom regions are shaded gray. The middle region is white and contains two labels, D_1 and D_2 , positioned to the left and right of a central vertical line.

Diagram 2 (Right): A circle divided into three horizontal regions. The top and bottom regions are shaded gray. The middle region is white and contains two labels, D_1 and D_2 , positioned to the left and right of a central vertical line. Additionally, there are two black dots on the horizontal line, one in each of the white regions, and two white semi-circular regions on the left and right sides of the circle.
